This focus issue is devoted to Micro-Nano Systems in Health Care and Environmental Monitoring. It has been an exciting opportunity to collect together papers from invited speakers and authors who participated in the related symposium held at the 227th ECS meeting in Chicago in May 2015. This meeting brought together medical professionals, clinicians, engineers, chemists, biologists and physicists under the same roof. This symposium and the papers published in the focus issue provide for a synopsis of the research, development, and technological evolution of micro-nano sensors and systems in healthcare and environmental monitoring applications.

The guest editors would like to thank all of the authors who have contributed manuscripts for this issue, all of the reviewers, Rangachary Mukundan, Petr Vanýsek, Bryan Chin and Dennis Hess for their guidance, and importantly the ECS staff, especially Ann Goedkoop, Paul Cooper, Beth Schademann, and Andrea Guenzel for making this issue a success. We would also like to thank the ECS Organic and Biological Electrochemistry Division for co-sponsoring the symposium. We look forward to your participation in future symposia and focus issues sponsored by the Sensor Division of The Electrochemical Society.
